Netaji Subhas University of Technology, Delhi

Subject: Offer of Internship – PyAMorph Research Project

Dear Students,

I am pleased to offer you an internship position to participate in the research project titled "PyAMorph: High-Fidelity Implicit Geometry Modelling and Morphometric Analysis on Adaptive Meshes". This internship is scheduled for a duration of six months, effective from **January 1, 2026, to June 30, 2026**.

In this role, you will be involved in the development of a parallel adaptive framework for multi-source implicit modelling and morphometry. Your primary responsibilities will include working with Signed Distance Functions (SDFs) within a Constructive Solid Geometry (CSG) environment and utilizing hierarchical adaptive mesh structures to resolve material interfaces. This work is critical for bridging the gap between experimental imaging and high-fidelity solvers for heterogeneous systems.

Please be advised that this is a voluntary research internship. This position is **unpaid**, and there is **no stipend or financial compensation** associated with this work.

We look forward to your contributions to the PyAMorph framework and its application to microstructure analysis. Please signify your acceptance of this offer by replying to this communication.

Sincerely,

S. Pradeep Kumar
